ABOUT PMAS

PMAS, Precision Mass Airflow Solutions, was created to research, develop, and test airflow related products for O.E.M. and aftermarket applications. Through years of experience and the ability to accurately measure precise airflow, PMAS became the leader in precision airflow measurement technology. The company later evolved to manufacture precision lab-grade and commercial high-performance flowmeters with accuracy and performance unmatched in the industry.

Over the last 14 years PMAS has developed many of the best performing mass airflow products in the world -- backed up by many airflow related patents. PMAS carries an ever-expanding line of mass airflow sensors and manufactures many other private label products for well-known companies in the industry.

In 2015 PMAS realized a technology void in the cold air intake market which subsequently led us to designing complete cold air intake solutions. We leveraged our experience in fluid dynamics, airflow research and mass airflow sensor design to create some of the best performing air intakes in the industry.

Continuing forward, we feel that our experience and knowledge base provides us with a unique opportunity. It positions us to share our technology with you, our customers, by providing performance solutions that actually work well and do so in the real world.
